

Terms and Conditions

Calibration includes minor adjustment and small battery replacement. Large repairs will be quoted separately.

All calibration certificates issued will be NIST traceable. It must be stated on your purchase order if an ISO/IEC 17025 accredited calibration certificate is required.

If no tolerance, specifications, or print is given for custom or specialized gages, actual readings will be provided with no statement of pass or fail.

Calibration intervals on calibration labels or older calibration records will be used until stated otherwise. Customer must supply calibration cycle on new gages.

For on-site calibration, a Tool Problem Log (TPL) will be provided with a summary of gages found out of tolerance or needing adjusting. This TPL is for customer informational use only and does not take the place of the actual calibration certificates and reports.

It is the customer's responsibility to let Angle Calibration know of any changes to the scope of Angle's in-house work. Any major tool quantity change may have to be rescheduled.

Angle Calibration's standard reporting is used unless specified otherwise.

Please state in writing any changes to the approved terms and conditions, on-site setup, or customer representative.

For ISO/IEC 17025 accredited calibration, no allowance will be made for measurement uncertainty. In or out of tolerance findings will be determined by manufacturer or customer specifications. The customer shall assess the results and uncertainty when determining if the results meet their needs. If other requirements are needed, such as guard banding, it must be requested in writing before calibration begins.

Standard terms are Net 30. Credit Cards are accepted within 10 days of invoicing.

Rush Service is available for an additional charge.
